OFFICE OF THE
REGIONAL ADMINISTRATOR

Ex. 6 - Personal Privacy

Thank you for your comments regarding the Environmental Protection Agency's work at the West Lake Landfill Superfund Site. Administrator Gina McCarthy has asked me to reply to your comments since Region 7 is the Agency's lead office for this site.

In your correspondence you express your desire to have the site transferred to the Formerly Utilized Sites Remedial Action Program which is currently being administered by the U.S. Army Corps of Engineers. The FUSRAP designation is made either by the U.S. Department of Energy, based on criteria set forth in DOE policy, or by Congress. The EPA plays no role in selecting sites for FUSRAP. Regardless whether the EPA manages a site or the site enters the FUSRAP program with the USACE lead responsibility, the cleanup of the site in either instance is performed in accordance with the Superfund process. In other words, the USACE would follow the same legal and technical steps of the Superfund law as EPA follows.

The EPA recognizes the expertise the USACE has with extensive construction projects and familiarity with the St. Louis FUSRAP sites. The EPA has a formal agreement with the USACE to access their technical expertise on the isolation barrier project and to provide an independent review of additional work the responsible parties are performing to identify and select a final remedy at the site.

The second point in your correspondence stated that the Pattonville Fire District had confirmed two hot spots in the north quarry. In February, we talked with a Pattonville Fire District official about the flyover of the site using an infrared camera. We spoke with him about the benefits as well as limitations of such equipment for the collection of representative data. To date, the Pattonville Fire District has not submitted any data to EPA regarding hot spots in the north quarry. The EPA also continues to collaborate with the Missouri Department of Natural Resources and the Attorney General's Office on the collection and analysis of temperature and gas data in order to monitor the SSE at the Bridgeton Landfill.

Lastly, I want to assure you that EPA remains focused on, and committed to, community engagement at the site. The EPA continues to work with community groups such as Just Moms STL. EPA met with representatives of Just Moms STL in December 2014. We also had a meeting scheduled with a representative of Just Moms STL in February but unfortunately that individual was unable to attend.

Printed on Recycled Paper

The EPA will continue to work closely with Just Moms STL, the Community Advisory Group, and all community members around the West Lake Landfill Superfund Site. For additional information about the Site, please visit Region 7's West Lake Landfill webpage
http://www.epa.gov/region7/cleanup/west_lake_landfill/index.htm

Sincerely,

A handwritten signature in black ink, appearing to read "Mark Hague". The signature is fluid and cursive, with the first name "Mark" and last name "Hague" clearly distinguishable.
